

Data Collection and Preprocessing Phase

Date	1 Oct 2024
Team ID	team-739715
Project Title	Real-time Bone Fracture Detection with YOLO-V8 Using X-ray Images
Maximum Marks	2 Marks

Data Collection Plan & Raw Data Sources Identification Template

The data collection plan sources annotated X-ray images from platforms like Kaggle and Roboflow, focusing on diverse fracture types. Raw data will be preprocessed with resizing and noise reduction to ensure quality for YOLO-V8 training.

Data Collection Plan Template

Section	Description
Project Overview	This project uses YOLO-V8 to detect bone fractures in X-ray images in real-time, enabling quick and accurate diagnostics to assist healthcare professionals and improve patient outcomes.
Data Collection Plan	The plan involves gathering annotated X-ray images of various fracture types from diverse medical imaging datasets, ensuring coverage of different demographics, image qualities, and anatomical variations.
Raw Data Sources Identified	<input type="checkbox"/> Public Databases: Datasets from Kaggle and other open medical repositories. <input type="checkbox"/> Hospital Archives: De-identified X-ray records with expert annotations.

	<input type="checkbox"/> Synthetic Data: Augmented or simulated X-rays for underrepresented fracture types. <input type="checkbox"/> Research Publications: X-ray images shared in academic studies.
